ZOOM: IDEATION & VALIDATION

By Group #3; Greg Fyfe, Tyler Evangelista, Ali Aman Shakir, Elizabeth Engel, Hunter Jablonski, Joey Sriraman, Kendra Bucci, & Lexie Bradford

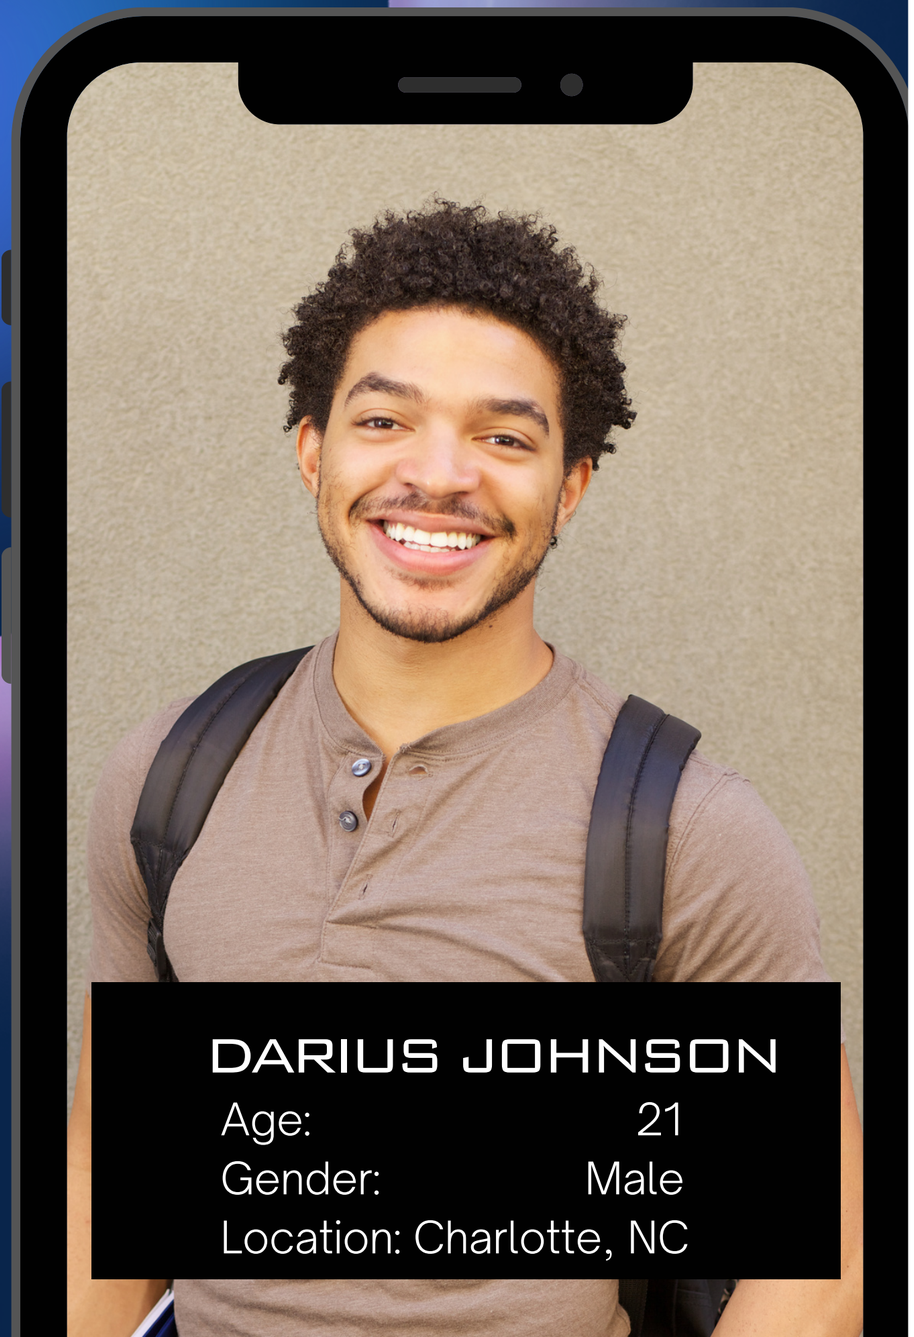

PROBLEM STATEMENT:

How might we optimize app performance for college students using the Zoom mobile app to ensure remote learning and enhance their overall educational experience?

PERSONA:

ABOUT

Darius divides his time between college and interning at an office, maintaining a busy schedule. He dedicates significant hours to studying and frequently takes and organizes detailed notes during classes and meetings.

PERSONALITY

Tech-Savy

Efficient

Diligent

Adaptable

GOALS

Darius needs a dependable meeting platform like Zoom, with collaborative note-taking features for efficient information management. Additionally, he seeks a user-friendly and customizable interface to meet his specific organizational preferences and academic requirements.

PAIN POINTS

Darius is frustrated by the inability to save comments from Zoom meetings, hindering his ability to review and retain important information. He worries about the organization of his notes, fearing that crucial details might slip through the cracks. Additionally, he's concerned about the possibility of missing essential points during meetings.

SKILLS

Note-Taking

- Spotify

IDEATION
OVERVIEW

SILENT BRAIN DUMP:

Elizabeth Engel

- Run constant logistics that take in data and in return try to fix the problem with updated software
- Input a customer help AI button for quick results
- Collaborative opportunities other than just breakout rooms
- Integrate Zoom app with canvas

Ali A. Shakir

Bandwidth Management: Develop a feature that adjusts video quality dynamically based on the user's internet connection to ensure a smooth learning experience even in areas with poor connectivity.

Low Data Mode: Create a low data mode that allows students to conserve mobile data while using the app, making it more accessible for those with limited data plans.

Offline Mode: Implement a feature that allows students to download lectures, documents, and assignments for offline viewing, ensuring they can access materials even without an internet connection.

Collaborative Note-taking: Integrate note-taking tools within the app that sync with the lecture, enabling students to take notes directly while watching the class.

Tyler Evangelista & Lexie Bradford

- Frequently checking customer reviews, comments, and suggestions on what needs to resolved
- Monthly check-ins across all departments to see if there are any issues or features they can improve on
- Encourage users and employees to submit suggestions or ideas

Kendra Bucci

1. provide subtitles
2. screen sharing by mutliple people
3. allow student recording of session
4. provide a help button for fast quick resolutions
5. a translation option
6. a transcript emailed to participants after meeting is complete

Greg Fyfe

1. Report button (freezes/people)
2. A.I. animations (interactions)
3. Multple screen sharing
4. Making groupchats within app
5. allow videos to be seen instead of links in chat

Hunter Jablonski

- Improvement in video quality
- Have a chat that connects to an app such as groupme or can connect through text
- Captions and translations

01 To begin we brainstormed silently and independently on different solutions to our problem statement.

02 In doing so we enabled all participants to express their thoughts and ideas without external influence or commentary.

03 We facilitated the amalgamation of diverse ideas, ensuring a comprehensive perspective.

REVERSE BRAINSTORM:

Increase subscription fees	Discount prices for students, businesses, etc.	Limiting the amount of comments that can be made in the chat	Allowing the premium users unlimited amount of comments
Have an initial purchase price for downloading the app from the app store	Set the at a reasonable price	Removing the ability to comment emojis	Create emojis specific to zoom
Start having Ads/Pop Ups within the meetings	Make it so that the premium version is Ad free	Premium members can be restricted to password sharing	Include a family or friends sharing plan
Charge user without a premium subscription an X amount per minute after their free 40 minutes	Set the extra charge at a low price, maybe by cents	Change the theme colors to be bright colors only, or only have a light version	Allow users to choose their own color setting/ preference
Short commercials in between meetings, every X minutes	Have a skip button for these "commercials" or ads after X seconds	Limit calls and meetings within the users country	Expand connections even further to other areas where Zoom is not as widely recognized

We presented an innovative method for team members to collectively engage in reverse problem-solving. A team member introduced a challenge, prompting others to provide solutions, leading to the generation of novel ideas that may not have initially occurred to us.

Live anonymous ratings	Create a system that keeps anonymous ratings hidden until the meeting has ended	Get rid of reactions	Take away certain reactions that might disturb other students during class
Allow a voice changer	Allow owner of zoom to moderate who gets access so it isn't used as a distraction	Allow for Data Collection	Include a 'Report Button' to collect data during any visual or audio interference
Add 'Donate to me' option	Don't include a donate button but an option to publish a pin a link in chat if anyone wanted to help support club cause	Include Ads and PopUps	Create special features that can be used after watching an Ad
Allow camera on only classes	Keep the option for camera off and have people upload a picture or create an avatar	Make It Difficult To Get In Contact With Customer Support	Create better support features, 24hr AI or email/phone # to contact
Real-Time Augmented Reality Pranks	Use a system to check and screen the AR upload	Get Rid Of Screen Share	Create settings to include multiple screen shares, easier setting options

ROLE STORMING:

During this exercise we took on the identity of both fictional and real characters in which would have their own style of finding solutions for our problem statement.

When employed, we leveraged the concept of "adopting others' perspectives," enabling us to gain insights into various viewpoints and alternate problem-solving approaches.

Sherlock Holmes

Sherlock would first read every book and insight he can find on Zoom, mobile app features, and student feedback. Then, he will look for patterns and analyze the date within his "mind palace", associating pictures with words. Furthermore, Holmes would conduct his own hypothesis and experiments using his highly logical thinking. Finally, he would use deductive reasoning to identify and address the issues at hand.

Hermione Granger

If I were Hermione, I would aim to optimize the app's efficiency by offering comprehensive details about the queue, including wait times and relevant information about the menu and current orders.

Walt Disney

Walt Disney was a visionary and creative thinker known for his ability to tackle challenges with imagination and innovation. If we apply his creative problem-solving approach to the ideas for optimizing the Zoom mobile app for college students, he would focus on an enjoyable user experience. Being a pioneer in animation, he would likely be interested in enhancing user engagement through A.I. animations.

Oprah

Create an incentive for employees to resolve issues. Do a giveaway contests for random users that submit suggestions or write reviews/comments

Mary Poppins

Kendra Bucci
she would make it easay to join meetings: one click

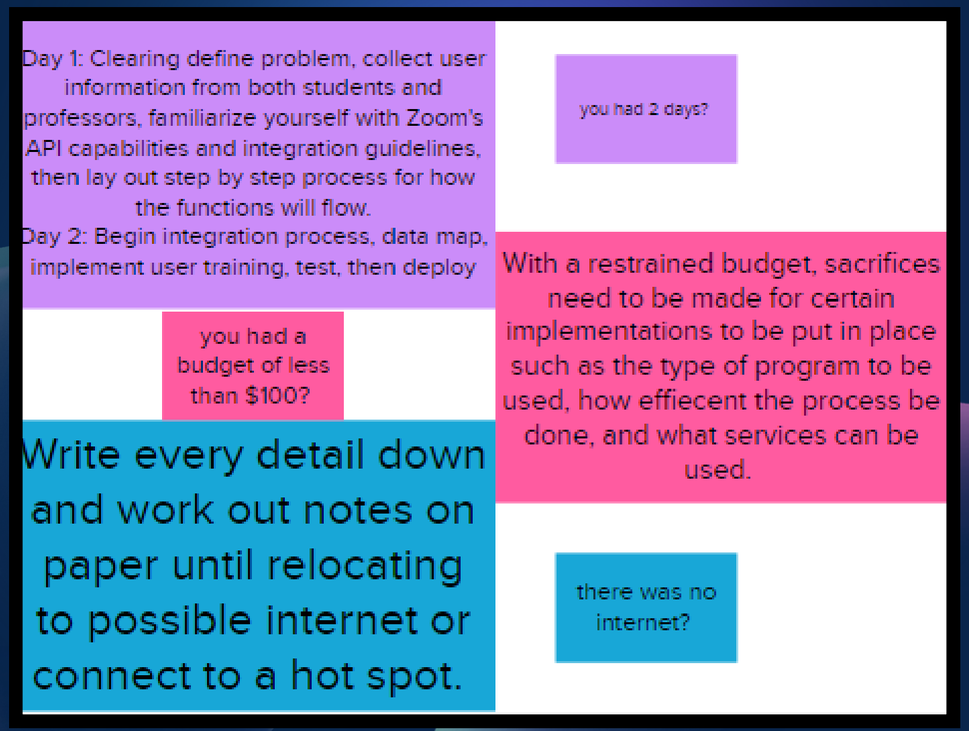

she would make it more fun by addings games and ice breakers within the application

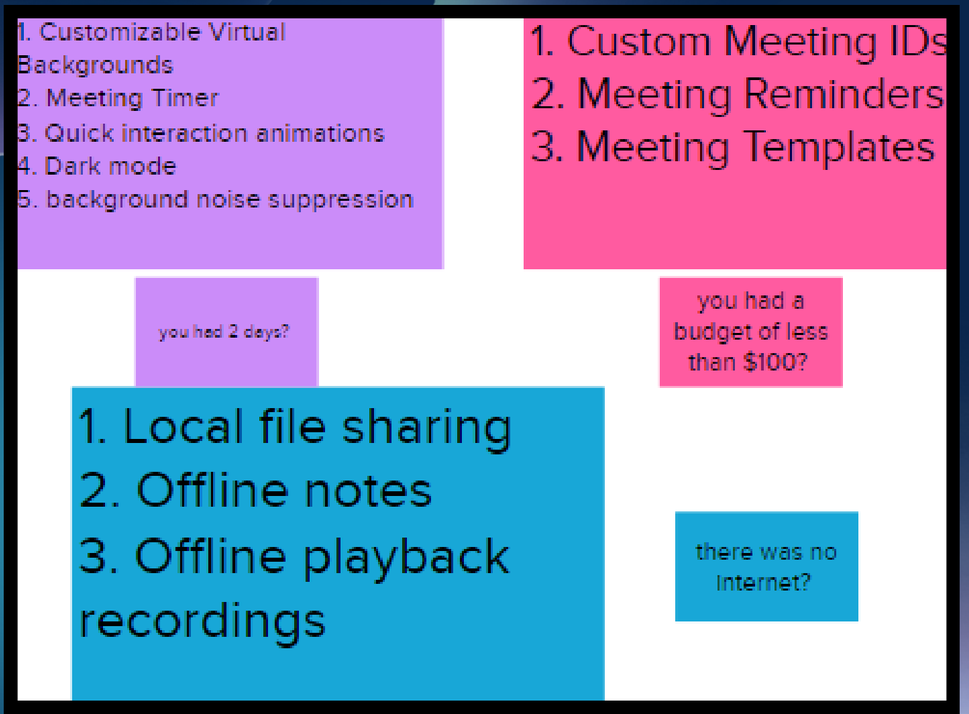

she would make it easy for those with disabilities to use: subtitles, screen reader for chat

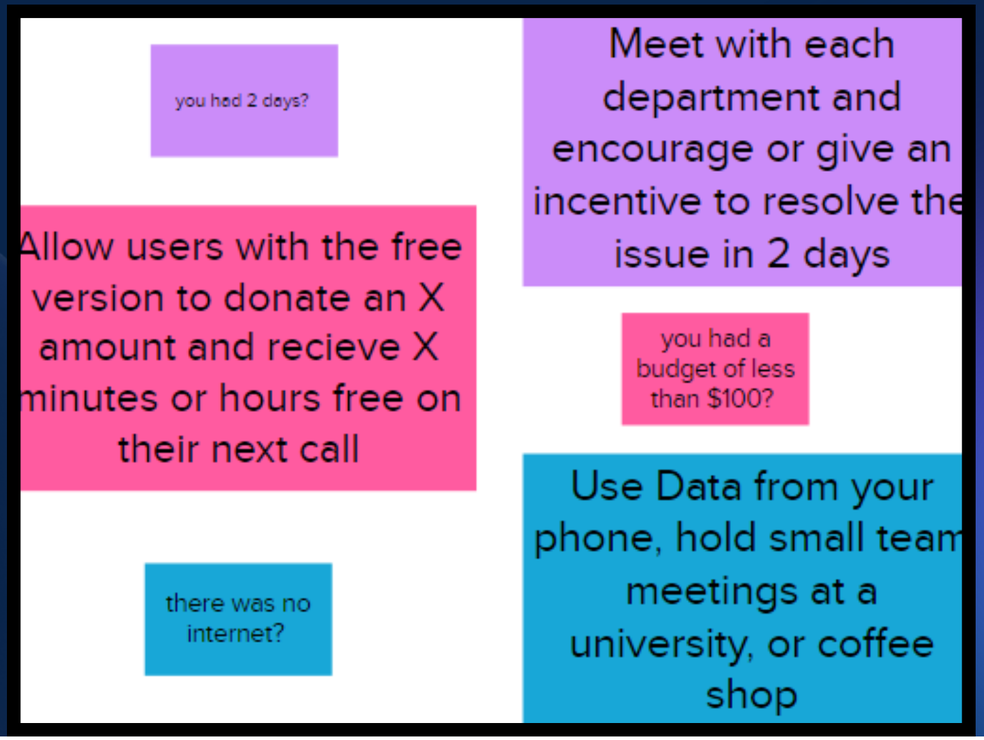

Leonardo da Vinci

Design the app to be more user-friendly and visually appealing ? for customer appeal/experience ?

WHAT IF...

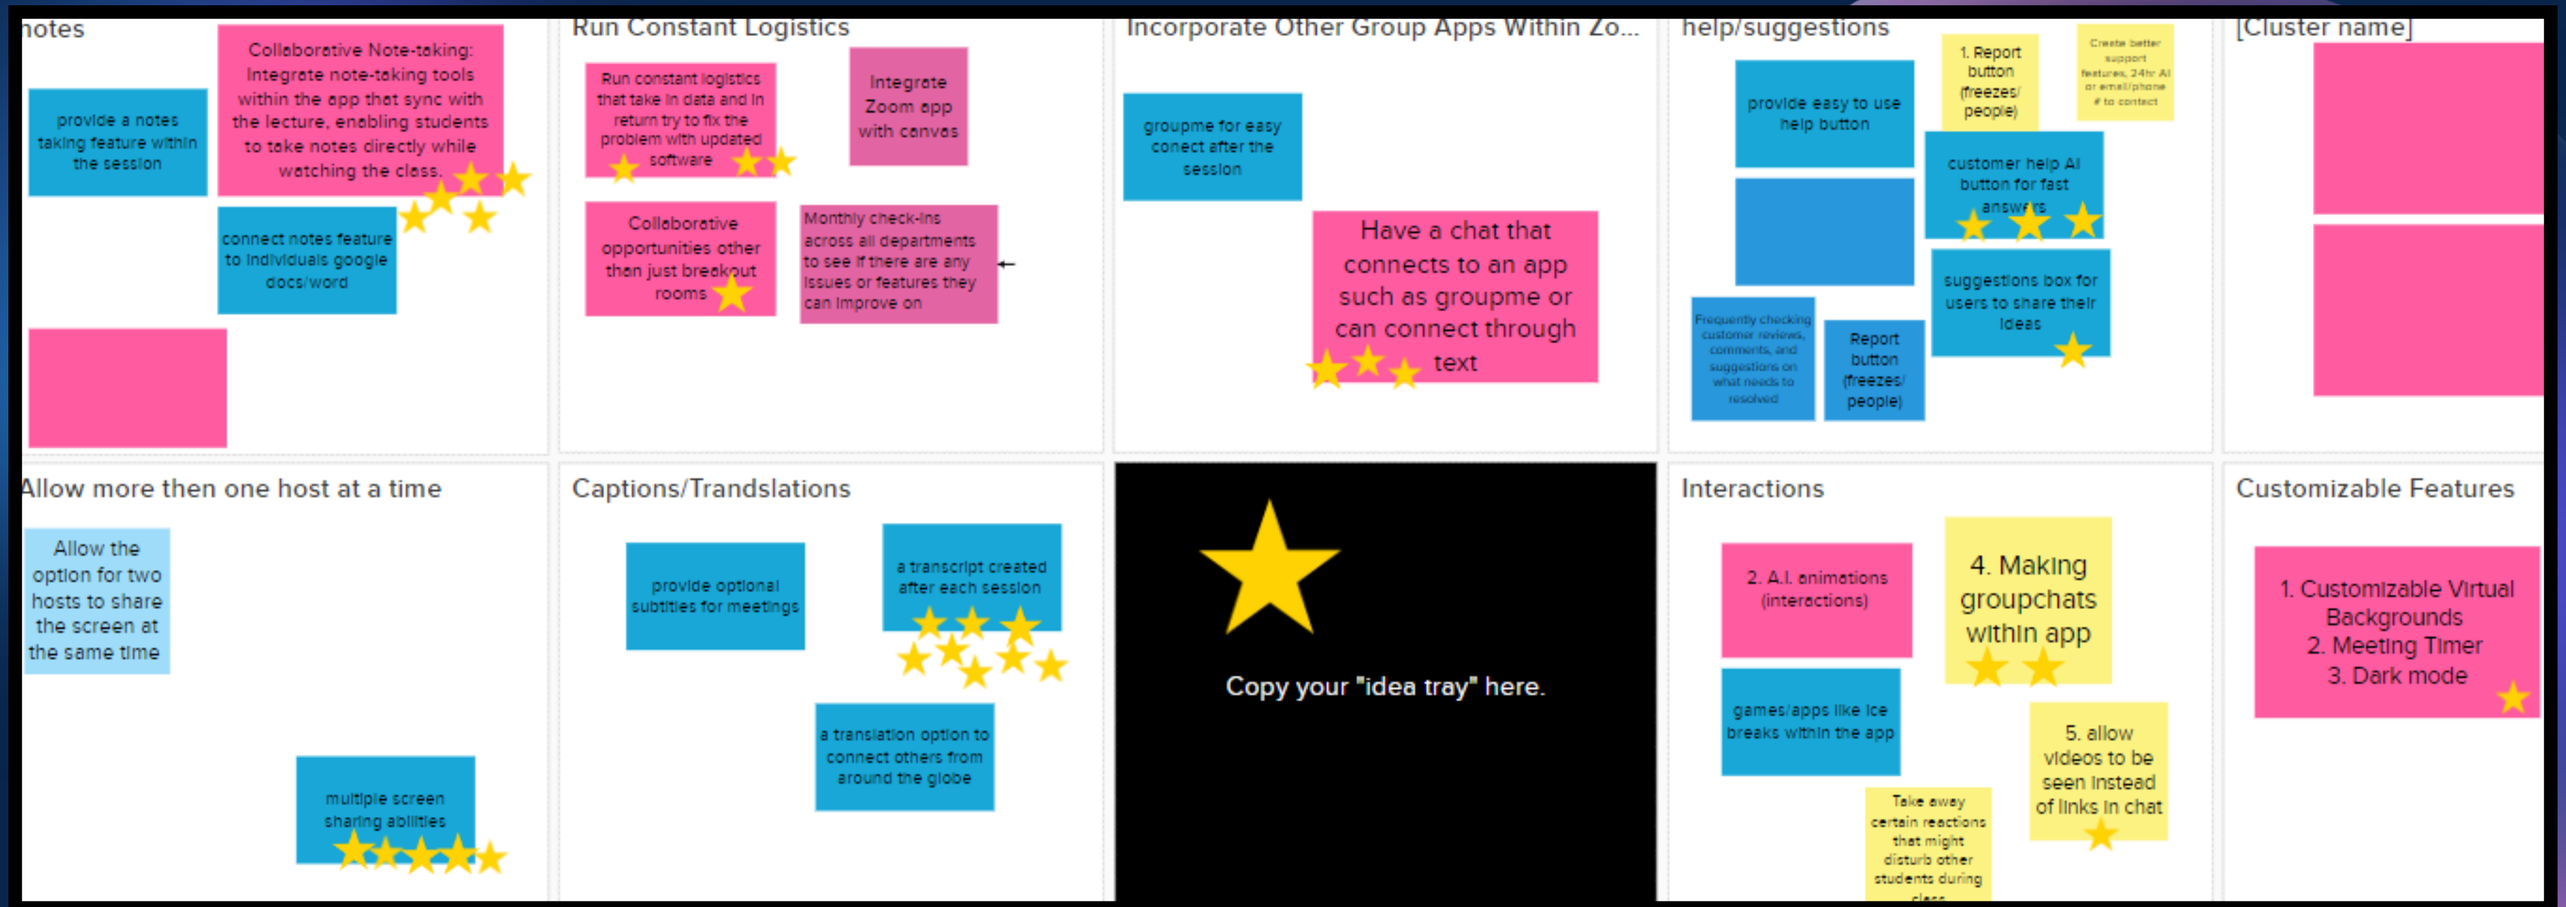

The next exercise gave us strict restrictions in which to be able to solve the problem statement. Through this activity, we could distinguish between what is achievable and what might be a bit beyond our current reach.

CLUSTER BOARD:

In our last exercise, we categorized and sorted our different approaches to solving our problem statement. This way it was easier for the team both to analyze and vote through stars on what our team could effectively do.

IDEATION
RESULTS

RESULT BREAKDOWN:

Narrowing of Ideas:
We brainstormed broad ideas and organized similar concepts into categories to identify patterns and connections. We then evaluated the ideas based on criteria related to the objective, emphasizing clarity and conciseness, and concluded with a voting process to make the final selection.

Building of Ideas:
Collaborative Workshops involved idea presentations from each member, followed by collective refinement. The iterative process entailed revisiting ideas multiple times and incorporating feedback and diverse perspectives. Developing case scenarios for each idea aided in visualizing its application potential.

De-duping of Ideas:
Through consolidation and analysis, we minimized redundancies seeking external feedback provided fresh perspectives. These strategies collectively facilitated a comprehensive and efficient ideation process, fostering creativity while ensuring the relevance and effectiveness of our ideas.

FINAL VOTE:

01

A transcript created after each session. A detailed offline transcript with the ability to be downloaded by students for future use.

of Votes: 0

02

Collaborative Note-taking: Integrate note-taking tools within the app that sync with the lecture, enabling students to take notes directly while watching the class

of Votes: 5

03

Multiple screen sharing abilities. This setting will allow multiple users to simultaneously share screens during the zoom meeting.

of Votes: 1

IDEATION NAPKIN

IDEA NAPKIN

Give your idea a name:

LectureSync+

Describe your idea in one sentence:

LectureSync+ is an innovative educational platform that transforms student engagement with lectures by seamlessly integrating note-taking tools, enabling real-time note-taking during class viewing.

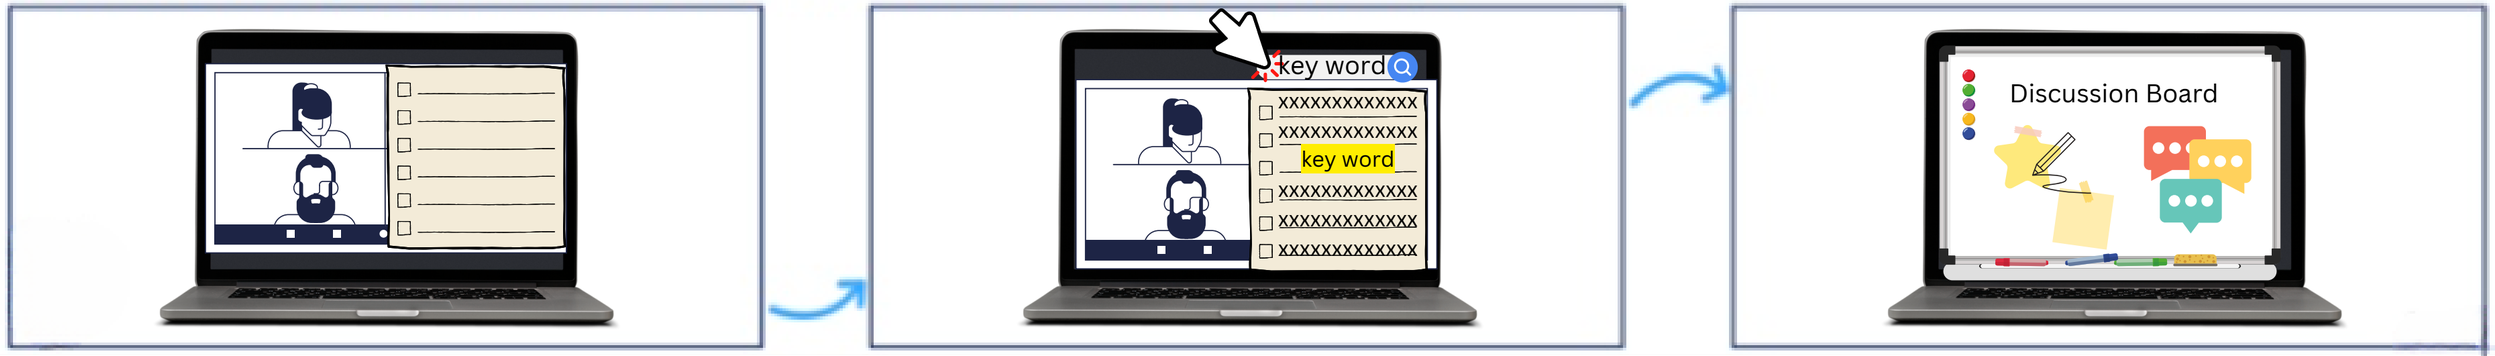

What issues does your idea solve?

LectureSync+ addresses the challenge of simultaneously taking notes and following online classes, offering users an all-inclusive platform for added convenience and an enhanced remote learning and online experience.

How does the user profit from your idea?

Encourages active participation and collaboration during lectures, facilitating efficient review through searchable and summarized notes, all while providing flexibility in learning to accommodate various preferences and styles.

Sketch how your idea solves the defined issues in 3 steps:

Thank You!
