Dear Hiring Manager,

I am writing to apply for a field operations or project coordination role. I combine hands-on HVAC-R experience, current on-site supervision of commercial mechanical work and a business degree, which lets me understand both the work in the field and what the client and general contractor need to see.

As On-Site Supervisor at Arthur Mechanical, I am the main point of contact with general contractors on active job sites. I attend contractor meetings, prepare proposals and bids, build material lists, source materials and pricing from vendors, and coordinate deliveries so crews stay productive. I supervise field staff, support scheduling and respond to emergency service calls, and I introduced Housecall Pro to improve job tracking.

My technical foundation comes from an associate degree in Air Conditioning, Heating and Refrigeration Technology and field experience with Johnson Controls and Edison Heating & Cooling, where I serviced boilers, furnaces, rooftop units, chillers and cooling towers. I hold OSHA 30, EPA Universal, Confined Space and Aerial Lift certifications.

I also spent a year at a New York PR agency managing client communication and reporting for national brands, so I know how to keep owners and stakeholders informed with clear, professional updates. I would welcome the opportunity to bring that mix of technical and communication skills to your projects.

Thank you for your time and consideration. I would welcome the chance to talk about how I can help your team, and you can see examples of my work at gregfyfeportfolio.com.

Sincerely,

Gregory Fyfe
